

(a)

SULFUR 2p REGION

(b)

COLUMN PERFORMANCE

Sulfur 2p region of the bioreactor solid. Panel (a) gives the raw scan with a Savitzky-Golay 5-point second-order smooth and the straight-line background overlaid; the vertical markers are the reference species, drawn at the assigned maximum and scaled to the modelled peak height on the right-hand axis. Panel (b) gives the influent and treated effluent sulfate and the treated effluent zinc against elapsed time, with the failure day at 458 d marked.
