

POLYMER MICROPARTICLE PRODUCTION – SHIFT HANDOVER TEMPLATE

1. Production Operations Status

Monitor and document the operating status of all production units during the shift. Verify that all equipment is operating in RUN mode unless scheduled maintenance is in progress. Record any deviations from normal operation including startup, shutdown, or maintenance activities.

Unit	Operating Mode	Status	Notes
Polymer Solution Preparation	RUN / OFFLINE		
Aqueous Phase Preparation	RUN / OFFLINE		
Emulsification Unit	RUN / OFFLINE		
Monitoring Port	RUN / OFFLINE		
Evaporation Unit 1	RUN / OFFLINE		
Evaporation Unit 2	RUN / OFFLINE		
Shared Condenser System	RUN / OFFLINE		

2. Quality Control & Quality Assurance Tracking

Record all quality control measurements and testing performed during the shift. Ensure particle size analyzer data is logged for monitoring port samples and final products. Note QC status (PASS/FAIL) and any corrective actions taken for failed tests.

Sample Location	Analyzer ID	Volume Mean Diameter (µm)	QC Status	Time Sampled
Monitoring Port				
Product 1				
Product 2				

3. Critical Process Parameters

Document key process parameters to ensure process consistency and product quality. Verify feed rates are within specified ranges and emulsifier speed is stable.

Parameter	Target Range	Actual Value	Within Spec
Polymer A Feed (kg/h)	23–25		
Solvent A Feed (kg/h)	970–980		
Water Feed (kg/h)	505–515		
Surfactant Feed (kg/h)	10–12		
Emulsifier Speed (rpm)	1740–1770		

4. Solvent Recovery & Environmental

Item	Status / Notes
Condenser Temperature Control	
Solvent Recovery Rate	
Environmental Compliance	

5. Shift Handover Notes

Operator Name: _____ Shift: Day / Night Date: _____

Issues/Concerns: _____

Action Items for Next Shift: _____

Shift Supervisor Signature: _____ Time: _____
