

POLYMER MICROPARTICLE PRODUCTION - SHIFT HANDOVER TEMPLATE

Campaign: C-104

1. Production Status

Confirm each unit's operating mode at shift end. Record any deviation, startup, shutdown, or maintenance activity.

Process Unit	Operating Mode	Notes
Polymer Solution Preparation Vessel		
Aqueous Phase Mixer		
Emulsifier		
Monitoring Port		
Evaporator 1		
Evaporator 2		
Shared Condenser System		

2. QC and QA Tracking - Particle Size

Record particle size analyzer results for each location. Blank template - values entered by operator.

Sample Location	d10 (µm)	d50 (µm)	d90 (µm)	Span	Volume Mean Diameter (µm)
Monitoring Port					
Product 1					
Product 2					

3. Critical Process Parameters

Verify actual readings against the C-104 target. Flag any parameter outside spec.

Parameter	Target	Actual Value	Within Spec
Polymer A Feed Rate (kg/h)	20.0		
Solvent A Feed Rate (kg/h)	980.0		
Water Feed Rate (kg/h)	500.0		
Surfactant Feed Rate (kg/h)	10.0		
Emulsifier Speed (rpm)	1800		

4. Solvent Recovery Tracking

Line	Condenser Recovery Rate Target (kg/h)	Loss on Drying Target (wt%)	Actual Recovery	Actual LOD
Product 1 line	489.8	0.10		
Product 2 line	489.7	0.12		

5. Shift Handover Notes
